What is “One Health”?

- **The World Health Organization (WHO) defines “One Health” as “an integrated, unifying approach to balance and optimize the health of people, animals and the environment. It is particularly important to prevent, predict, detect, and respond to global health threats such as the COVID-19 pandemic.”**

The principles of the One Health Approach are being implemented globally and nationally by the W.H.O. and the U.S. federal government.

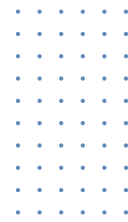

➤ Background

This concept has been around since the 19th century. German scholar Rudolf Virchow, who came from a farming family, was an early proponent of One Health. He said, “Between animal and human medicine there is no dividing line — nor should there be. The object is different, but the experience obtained constitutes the basis of all medicine.”

During the last three decades, approximately 75% of emerging infectious diseases among humans have been zoonotic diseases that can be transmitted from animals to people. This has encouraged modern proponents of One Health. In the 1980s, epidemiologist Calvin Schwabe called for a unified human and veterinary approach to combat zoonotic diseases, providing the modern foundation for One Health.

Why is this holistic “One Health” approach problematic?

01

Embedded in America's foundation is the belief that inalienable rights come from God. The W.H.O.'s One Health approach challenges this by viewing the state as the source of human rights — a significant worldview shift. **This fundamental change empowers the government to take those rights away.**

02

One Health elevates government overreach and power to trigger a worldwide pandemic declaration, the same or worse than COVID-19, simply because a handful of plants or organisms are infected with a bacteria or virus.

03

One Health appears logical until the W.H.O.'s solutions require human and animal vaccinations on a vaccine passport or digital ID to engage in the public square. The original Pandemic Agreement included mandates for experimental vaccinations and vaccine passports and digital IDs to participate in society.

04

If the Pandemic Treaty moves forward in its current form, the power of W.H.O. during *whatever it deems to be a health emergency* would be unprecedented. This approach threatens our national sovereignty, God-given rights, and personal freedom.

➤ Current Status

International Pandemic Agreement/Treaty:

Although the W.H.O.'s Pandemic Treaty was delayed in June, it is not dead. Many scheduled meetings seek to revive this dangerous "treaty," which includes the One Health approach.

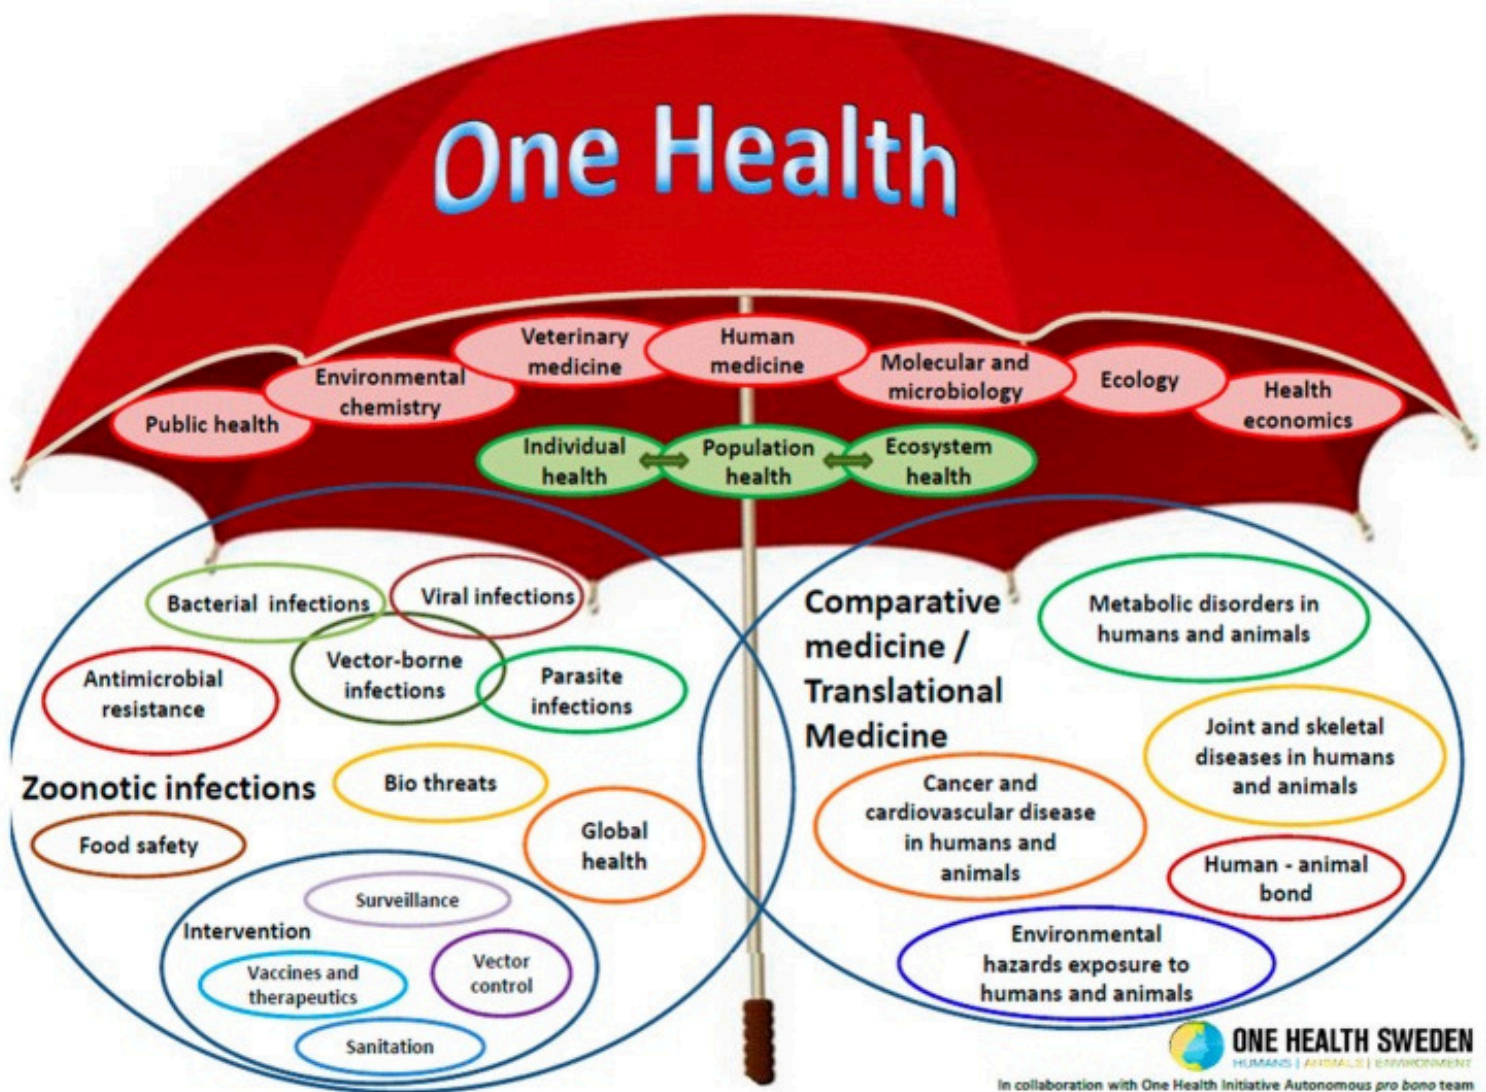

International Health Regulations

In June 2024, the W.H.O. passed several new amendments to the International Health Regulations. The IHR has many of the principles of One Health without labeling it as such. While some of the most concerning amendments were removed from the International Health Regulations, globalists have resumed pushing Marxist socialized medicine, dangerous trends of censorship and surveillance, a globally mandated response to climate change, and so much more through the Pandemic Treaty, Pact of the Future, Global Digital Compact, and Declaration of Future Generations to advance their agenda.

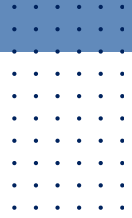

National

The United States is already implementing the One Health concept around the nation after Congress approved the One Health Framework through the federal budget in 2023. A host of agencies have implemented One Health, including, the Centers for Disease Control (CDC), U.S. Food & Drug Administration (FDA), U.S. Environmental Protection Agency (EPA) and more . Also, the White House rolled out the Global Health Security Strategy, which integrates the Pandemic Treaty language and One Health Approach.

> Fast Facts

01

Who is the W.H.O.?

A UN agency focused on global health since 1948. While it provides essential global aid, concerns arise over the Pandemic Treaty and International Health Regulations, both tied to the One Health approach.

02

What are the International Health Regulations (IHR)?

The IHR is a legally binding agreement (treaty) between 196 countries, including all 194 WHO member states, that outlines how to respond (defining “countries’ rights and obligations”) to international public health events and emergencies.

03

What is the pandemic agreement?

It is a euphemistically titled “instrument” that would be, in reality, a legally binding treaty with 20+ pages of language that numerous experts agree undermines national sovereignty, including the concerns with the One Health Approach, mandated vaccine mandates and digital ID, and other comprehensive methods of control in the name of pandemic preparedness.

04

What is the status of the pandemic treaty?

At the 2024 World Health Assembly, several amendments to the International Health Regulations were proposed and agreed upon by consensus, obtaining the required number of nation states needed for approval. The Pandemic Treaty failed, but plans are to pass the treaty by the end of 2024.

➤ Take Action!

01

Contact your federal lawmakers.

Educate your federal lawmakers about the dangers of the One Health agenda, and urge them to:

1. Remove the One Health framework from Section 2235 in the 2023 federal budget law.
2. Remove it from the Global Health Security Strategy. The One Health language (PDF) stems from the Advancing Emergency Preparedness Through One Health Act (HR 2061/S 681), which mandates a national One Health Framework for zoonotic disease prevention and control.
